PROFESSIONAL SUMMARY

Full Stack Developer specializing in C#, ASP.NET Core, and React.js, with experience building SaaS, e-commerce, booking, and notification systems. Skilled in developing RESTful APIs, SQL Server database solutions, authentication, integrations, and responsive frontend applications using React.js and Tailwind CSS. Experienced in building scalable applications and integrating backend services with modern frontend and external platforms.

SKILLS

Backend: ASP.NET Core, C#, Entity Framework Core, Dapper, ADO.NET, LINQ

Frontend: React.js, Next.js, Redux, JavaScript, Tailwind CSS

Database: SQL Server, PostgreSQL, Firebase Firestore

Tools: Git, GitHub, Docker, SSMS, VS Code, Swagger, Scalar, Visual Studio, Postman

AI-Assisted Development: Antigravity, Codex, Cursor, Claude - AI-assisted coding, Code generation, Debugging

Soft Skills: Communication, Teamwork, Ownership, Presentation

PROFESSIONAL EXPERIENCE

.Net Backend Developer, Sharaco Technologies Pvt Ltd Jan 2026 - Present · Pattambi, Kerala

- Developed backend services using ASP.NET Core, C#, SQL Server, Dapper, and Stored Procedures.
- Developed and maintained APIs for booking, rescheduling, cancellation, slot availability, reporting, and other business workflows.
- Built a centralized multi-channel notification service supporting WhatsApp and Email, with scheduling, retry handling, status tracking, and configurable templates.
- Worked on SaaS platform APIs and notification services, integrating backend systems with frontend applications and external platforms while troubleshooting and delivering production features.

Full Stack .NET Developer, Bridgeon Solutions LLP Apr 2025 - Jan 2026 · Kozhikode

- Built basic ASP.NET Core APIs and connected them with React.js frontends for small features and modules.
- Created REST APIs for login, product listing, and simple cart operations using ASP.NET Core and EF Core.
- Developed React components with Redux for state management, improving UI consistency.
- Implemented JWT authentication and role-based access as part of learning backend security.
- Used Swagger and Postman for API testing and documentation during development.
- Worked in Agile-style sprints, regularly updating tasks and improving features based on feedback.

PROJECTS

Flowbee Booking System — Appointment Scheduling Platform · ASP.NET Core, C#, Dapper, SQL Server, Stored Procedures, WhatsApp Business API, SMTP Email, React.js [Project Link](#)

- Developed backend APIs for booking, rescheduling, cancellation, slot availability, and booking management.
- Implemented multi-country, timezone-aware booking and slot availability, handling local working hours, staff schedules, holidays, slot duration, and cool-off periods.

- Implemented round-robin staff assignment and conflict detection with transaction-safe database operations to prevent double bookings.
- Developed WhatsApp and Email notification workflows for booking confirmations, reminders, cancellations, and rescheduling.
- Implemented audit logging, booking history, and analytics APIs for operational tracking and reporting.

AI Azima — Meat E-Commerce Platform · ASP.NET Core, C#, Entity Framework Core, SQL Server, JWT, FluentValidation, Swagger/OpenAPI

- Developed RESTful APIs for customer authentication, profiles, addresses, product catalog, cart, coupons, checkout, payments, and order management.
- Implemented JWT/OTP authentication, refresh tokens, role-based authorization, request validation, and standardized API responses.
- Built product customization and dynamic pricing for weight, cut type, marination, skin, and packaging options.
- Developed cart, coupon, checkout, delivery-slot, order tracking, cancellation, and rescheduling workflows.
- Developed admin APIs for inventory, orders, customers, notifications, analytics, roles, permissions, and audit.

KOOTAAN CSM SaaS Platform · ASP.NET Core, C#, ADO.NET, SQL Server, Notification Services

- Developed and maintained RESTful APIs for a SaaS-based customer service management platform.
- Implemented backend business logic and data access using ADO.NET and SQL Server.
- Developed notification service integrations for application and business-event notifications.
- Designed and optimized SQL queries and stored procedures for application workflows.
- Worked on API enhancements, debugging, and production issue resolution across the platform.

Centralized Notification Service — Multi-Channel Messaging Infrastructure · ASP.NET Core, C#, SQL Server, Queue-Based Async Delivery, WhatsApp Business API, SMTP Email

- Architected a centralized notification service for reusable messaging across multiple applications.
- Implemented queue-based asynchronous delivery with scheduling, retry handling, and status tracking.
- Built config-driven templates supporting company, branch, and event-level notification configurations.
- Developed bulk notification processing using Table-Valued Parameters (TVPs) and optimized database queries.
- Implemented a common notification orchestration layer for configuration lookup, placeholder replacement, encryption, and queue processing.

EDUCATION

BCA, University of Calicut

Aug 2022 - Apr 2025
